Micron Technology Inc.  
Boise, Idaho 83716

Subject: Application for Internship

I am highly interested in the intern positions and appreciate the time spent reviewing my application. Attached is a copy of my resume. I heard of this opportunity through James Decker, another intern from Utah State University.

I am a computer engineering student at Utah State University. I have completed coursework in Operating Systems, Algorithms and Data Structures, and Electrical and Digital Circuits. I currently work as a lab instructor teaching students to write and debug basic programs on FPGA chips in Verilog. I specialize in C++ and also have experience with Java, Verilog, Flash and CNC. I am learning Perl, and look forward to learning other languages.

I am particularly interested in working with Micron Technology Inc. because I am passionate about technology and innovation. Micron has done great things with memory and computing in general, and I would be honored to be a part of that.

I know that I would be an asset to this corporation. I communicate well with others and enjoy working as a member of a team. I absorb material quickly and can put it into practice effectively and efficiently. I am a man of integrity and I aim to exceed expectations.

I look forward to hearing from you. I will follow up on this submission in two weeks time via e-mail. Thank you again for reviewing my application and resume.

Sincerely,

Sam Tanner
